NORTECH

NORPASS3
INSTALLATION WIZARD

"Well, that's the equipment installed - now comes the ~~difficult~~ <u>easy</u> part"

There aren't many installers that look forward to configuring an access control installation. Setting card formats, access rights, door strike times, etc. can be laborious (and sometimes confusing).

Wouldn't it be great if you could just fly through the process using a simple to follow questionnaire with guidance to help you choose the right settings. You would be able to avoid inconveniences such as forgetting to configure a setting that shows up as a problem later while you're testing a reader at the far end of the building – or even worse, your customer discovers it after you have left the premises.
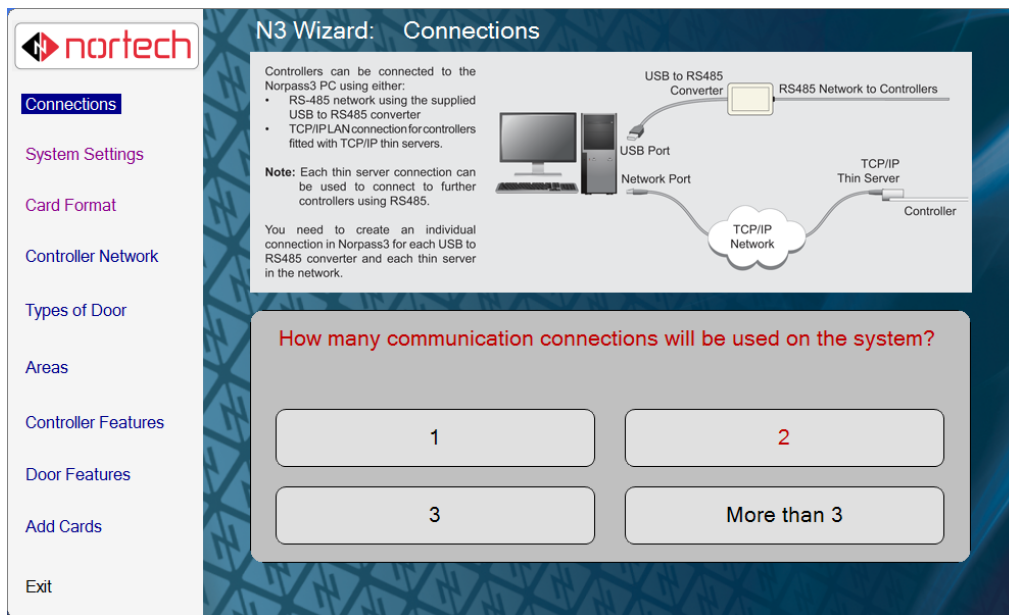

The Norpass3 Wizard does just that. Here's how it helps you to completely configure a new installation in just a few minutes:

Wizard Features

▶ Takes you through each stage of the configuration process step by step

▶ Uses simple multiple choice questions wherever possible

▶ Uses group settings to avoid the need to repeat common settings throughout the system

▶ Provides guidance and explanations throughout the process

Lose the hassle with the Norpass3 Wizard and make more time to get on with something else.
