

Welcome to the June issue of the Nortech's eNewsletter. We apologise for missing the March issue - we were busy developing the new website (see below) and changing our mail delivery system. We hope you find our articles interesting and informative. If you have any feedback or questions, please contact us at info@nortechcontrol.com

Nortech Online – Website Redesign

The new Nortech website is not just a pretty face!

Nortech's main website has undergone a redesign, not only to make it brighter and more inviting, but also to make it more informative and easier to find what you are looking for.

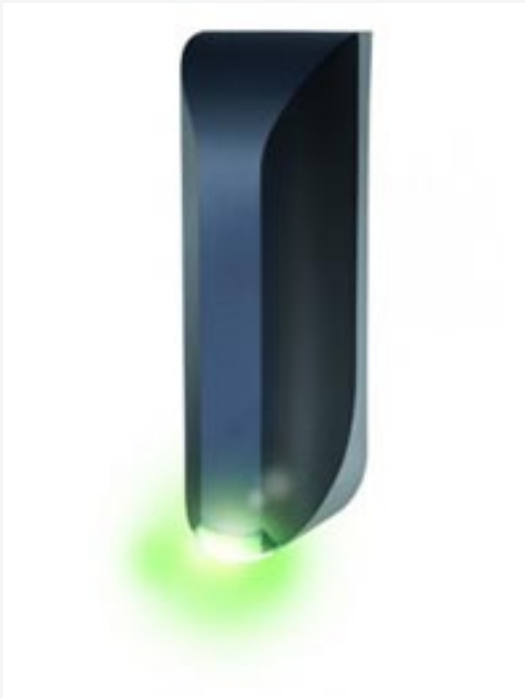

We've been very careful to maintain all of the good features that were added in the last redesign, whilst providing a face-lift and further improving usability.

The new home page enables you to find what you're looking quickly and keeps you up-to-date on what's new at Nortech. The new main menu allows you to get to your page with one or two clicks.

We invite you to take a look around the web site and offer your feedback.

New Product - Nedap uPASS Access

The revolutionary new uPASS Access is now available from Nortech

The small UHF hands-free reader from Nedap can read battery-free access tags at distances of up to 2 metres and was unsurprisingly nominated for IFSEC's 'Access Control Product of the Year'.

A user wearing a credential on a lanyard can be automatically identified without having to present their card to the reader, making it the perfect solution for doors that require both security and accessibility, where hands-free access is necessary, or convenient. For these reasons, uPASS Access is ideal for; warehouse doors, high volume entrances, hospital entrances, lab clean-rooms and disabled access.

The uPASS Access can be integrated with Norpass or virtually any or access control platform, and reads most popular card formats, including EM, Mifare and Legic.

Company News - Norpass3 Award Nomination

Norpass3 shortlisted for PSI Magazine Premier Award

We'd like to thank our customers for nominating our access control software, NorPass3 for the prestigious 'Best Software Based Product' in the 2013 PSI Magazine Premier Awards.

It seems that features such as the [Installation Wizard](#), Norpass Virtual system (Free demo software) and our most recent introduction, the Accommodation Feature have made installers' jobs more straightforward than ever.

We'd also like to remind you, that it's not too late to vote for us either: [Vote Now](#)

Whilst we don't strive to be nominated for awards, we certainly won't shun the recognition that the whole Nortech team has worked hard to achieve and assure our customers that we are always seeking to improve in everything that we do.

Product Update – Keeping You in the Loop

Nortech inductive loop vehicle detectors – an ongoing success story

Nortech inductive loop vehicle detectors are well known for their reliability, and have been very popular among our parking customers since the early days of Nortech.

As we highlighted in our last issue, the parking detector range has evolved to include the latest 'Primus' range with automatic frequency selection and built-in diagnostics. We offer a wide choice of models to suit many applications and budgets.

What is not so well known is that we also supply traffic detectors – a similar product but with faster response times and features specifically suited to fast moving vehicles. We have supplied these detectors for a wide range of applications, and one of the models has now been approved by Network Rail for use on railway crossings.
